

Safety Data Sheets (SDS) and Cosmetic Products

April 2023

CTPA Role:

The Cosmetic Toiletry and Perfumery Association (CTPA) is the trade association for the UK cosmetic and personal care industry.

The Association's role is to advise manufacturers, distributors and suppliers about the strict legal framework for cosmetics, to represent industry views to UK government, and external stakeholders and help promote information to the media on issues relating to the safety of cosmetic products. The CTPA acts as the voice of the UK industry and provides the most up-to-date interpretation of, and guidance on, regulatory matters affecting cosmetic products in the United Kingdom and internationally.

Why join the CTPA?

CTPA membership gives companies access to experienced regulatory, scientific and technical staff to help them market safe, effective products that provide a wide range of consumer choice both in the UK and overseas.

Membership provides companies with peace of mind with easy access to:

- up-to-date legislative references;
- guidance on compliance;
- confidential one-to-one advice;
- advice on best practice;
- advance knowledge of upcoming changes;
- global updates on key issues;
- media and consumer information; and
- 24/7 online resources accessible worldwide.

SAFETY DATA SHEETS (SDS) AND COSMETIC PRODUCTS

Legal Requirements

The manufacture of cosmetic products in Great Britain is covered by Schedule 34 of the Product Safety and Metrology Regulations 2019 (the UK Cosmetics Regulation) and its amendments. Northern Ireland follows the EU Cosmetic Products Regulation, in accordance with the provisions under the Northern Ireland Protocol under the EU/UK withdrawal Agreement.

Finished cosmetic products are exempt from the legislation requiring the provision of a 16-point Safety Data Sheet (SDS). However, cosmetic ingredients as raw materials or a bulk of a cosmetic product are not exempt.

The safety of chemicals is controlled by the UK REACH Regulation (Registration, Evaluation & Authorisation of Chemicals). Finished cosmetic products¹, including salon hair and beauty products, are exempt from the UK REACH requirements to provide safety data sheets (Title IV covers information on the supply chain, and Article 2.6(b) of REACH exempts cosmetics from these requirements).

This exemption applies to both consumer home-use and professional-use cosmetic products.

A safety data sheet is only required when a substance or mixture is classified as hazardous under the GB CLP Regulation (Classification, Labelling and Packaging). Whilst Safety Data Sheets are not required for cosmetic products (e.g. hair care products – finished cosmetic products are also exempt from the labelling requirements under CLP), they are for other products that are not cosmetics (e.g. disinfectants, household and cleaning products).

However, it must also be recognised that there are legal requirements under Health and Safety legislation. In the UK this legislation requires that a person to whom a substance is supplied should be provided with adequate information about the substance, so that it can be used and disposed of safely. Also, under the COSHH² (Control of Substances Hazardous to Health) Regulations, an employer is required to assess work involving 'substances hazardous to health' and to consider the risks. Companies which store or transport cosmetic products may also ask for information.

Common Practice

For hairdressing salons, CTPA has worked in collaboration with the HBSA (Hairdressing & Beauty Suppliers' Association) and in consultation with the HSE to produce a booklet entitled a "Guide to the Health and Safety of Salon Hair Products"³. The guide provides sufficient information on the hair products used in salons so that the owners can carry out their duties under COSHH.

¹ A "cosmetic product" shall mean any substance or mixture intended to be placed in contact with the various external parts of the human body (epidermis, hair system, nails, lips and external genital organs) or with the teeth and the mucous membranes of the oral cavity with a view exclusively or mainly to cleaning them, perfuming them, changing their appearance and/or correcting body odours and/or protecting them or keeping them in good condition. A finished cosmetic product is also understood as being ready for supply/sale to consumers.

² <http://www.hse.gov.uk/coshh/>

³ Copies of the Hair Salon Guide can be obtained from the HBSA: <https://hbsa.co.uk/coshh-booklet-2/>

The booklet offers information on different product types and is to be used in conjunction with product lists provided by the manufacturers, which link each product to the relevant product type. More information on COSHH and hairdressing can be found on the HSE website⁴.

For other areas of work such as beauty salons, spas, hotels, care-homes, retail outlets or hospitals for example, there is no standardised way in which information may be presented for the safe handling of cosmetic products by a professional or so that COSHH assessments may be made.

This information may be provided in the form of a letter explaining that the cosmetic product has undergone a risk assessment and that no special precautions are required, or it could include some technical information supplied in a general 'Safety Information' brochure. The details provided tend to include general, basic information on the product itself, advice on how best to store and handle the product and how to deal with any spillages and waste disposal of the product. If the product is flammable, has significant fumes or any potentially hazardous properties, then more specific information is also provided. Transport information may also be included if appropriate.

A simple template, created by CTPA, for supplying this information is found on page 4 of this document.

CTPA is aware that other cosmetic associations, namely FEBEA in France and IKW in Germany, have developed data information sheet templates as a means for member companies to provide information in an easy-to-use, clear format. The templates are available from these Associations to member and non-member companies.

Contact Details

FEBEA: Information and examples of the Cosmetic Product Technical Data Sheet, or FITPCs, available plus an order form. The documents are available for purchase in French and English.

IKW: Cosmetics Group Data Sheets (Gruppenmerkblaetter) have been compiled in cooperation with the Austrian and Swiss organisations. Cosmetics are listed according to product categories. IKW has set up a public database, at <https://gmb.ikw.org/>, which allows the download, free of charge, of brochures for various industry sectors as well as individual compilations of group data sheets. The material is available in German and English.

Please Note: The CTPA, FEBEA and IKW templates are only suggested formats for providing information on a finished cosmetic product. Other company or association information sheet designs or letters containing information are equally valid.

To reiterate, cosmetic products are exempt from the requirement to be accompanied by a 16 point SDS.

COSMETIC PRODUCT DATA INFORMATION SHEET

This information sheet is in the format as devised for cosmetics by the
UK Cosmetic, Toiletry and Perfumery Association (CTPA)

Company name:

Contact details:

Date:

Product name and/or Reference number:

Information:

1. Product description
General information
Composition
Physico-chemical characteristics
Stability and reactivity
2. Hazard information*
(For example: Irritant. Can cause allergic reaction. Inhalation)
3. Handling advice
Precautions during use
Exposure controls/Personal protection
4. Storage considerations
5. First aid measures
6. Accidental release measures
(Spillages etc.)
7. Risk of explosion and ignition*
8. Disposal information
9. Information relating to transport

***Please Note:** Finished cosmetic products are exempt from hazard symbol labelling requirement.

COSMETIC PRODUCT TECHNICAL DATA SHEET

Registered at the Court Registrar of the Commercial Court under number RG 2015071115
(Greffé du Tribunal de Commerce de Paris – Bureau des Expertises et des Usages
Professionnels)

- Introductory note -

The **Cosmetic Product Technical Data Sheet or FITPC** is a reference document representing a given **finished cosmetic product** category. It aims at supplying the useful information for the intermediaries in charge of the activities of transport and/or of storage of these products. It is intended for wholesalers, hypermarkets, department stores, carriers, forwarders and other operators of the logistic chain. It does not aim at answering the questions relative to the final use of this products including by professionals (hairdressers, beauticians...).

The product categories, for which such a document is available, are listed in *Annex 1*. Certain categories have necessitated the creation of a couple of separate data sheets, depending on information regarding transport in relation to the flash point, the boiling point temperature, the existence of a fire point or the concentration of a specific raw material (e.g. H₂O₂) in the finished product.

Each data sheet may be associated with one or more products of the same category. The information about the correspondence between a given product and a corresponding FITPC recovers from the responsibility of every manufacturer. It can be made by insertion of a generic cover page (example in *Annex 2*) or quite other referencing in an existing logistic system (e.g. packing list).

A description of this generic cover page is supplied in *Appendix* to the present document.

The FITPC constitute a "*consistent reference*" to be modified only in case of a change of regulations.

A document describing the contents of the 9 chapters composing the FITPC is supplied with *Annex 3*.

- List of FITPC -

General categories	Reference 2015	Product categories	Product sub-categories	Transport classification	Reference 2007
HAIR PRODUCTS	101 A - 01	HAIRDRESSING, HYGIENE OR HAIRCARE AEROSOL PRODUCTS	Spray	UN 1950	101.1
	101 B - 01	HAIRDRESSING, HYGIENE OR HAIRCARE AEROSOL PRODUCTS	Mousse or gel	UN 1950	101.2
	101 C - 01	HAIRDRESSING, HYGIENE, HAIRCARE PRODUCTS EXCLUDING AEROSOLS	Flash point < 23°C	UN 1266	102.1
	101 D1 - 01	HAIRDRESSING, HYGIENE OR HAIRCARE PRODUCTS EXCLUDING AEROSOLS	FP [23°C;60°C] - Fire Point : Yes	UN 1266	102.2 and 102.3
	101 D2 - 01	HAIRDRESSING, HYGIENE OR HAIRCARE PRODUCTS EXCLUDING AEROSOLS	FP [23°C;35°C] - Fire Point : No	UN 1266

COSMETIC PRODUCT TECHNICAL DATA SHEET

Category:

A. MANUFACTURER'S DETAILS

- Name of the Trading Mark and/or manufacturer:

- Address:

- Emergency telephone number:

- Emergency fax:

B. PRODUCT IDENTIFICATION

- Product(s) commercial name / Product(s) Code(s):

- Product(s) reference(s):

Document approved by:

Date:

Cosmetic Product Technical Data Sheet

- Explanatory leaflet -

1. SUBJECT

- The product's regulatory status under the Cosmetic Regulation (CE) n° 1223/2009 is indicated.
- It is also emphasized that the technical data sheet completes but does not replace the technical instruction leaflets and does not provide an exemption from the obligation to know the specific regulations concerning the product activity.
- The information in this document is based on the state of knowledge of the product in question at the time of compilation, the date of which is noted at the bottom of the page.

2. INFORMATION ON PRODUCT COMPOSITION

- Product category: this information corresponds to the title of the data sheet (e.g. Perm products).
- Danger: this information gives the physico-chemical risks associated with the product within the framework of its transport and storage.
- Ingredients: the ingredients which contribute to the physico-chemical risk (for concentrations > 1%) are identified.
- A phrase refers to the qualitative composition is listed under the heading INGREDIENTS associated with the product.

3. PHYSICAL AND CHEMICAL CHARACTERISTICS

- Physical and chemical properties: general information and important information concerning health, safety and the environment (flash point, pH, solubility, etc.).
- Stability and reactivity: conditions to be avoided that can influence product stability and that are likely to lead to dangerous reactions. (e.g.. temperature, light, pressure, humidity, shock, etc.); list of materials to avoid such as acids, bases, oxidants or any other specific substance likely to result in a dangerous reaction; dangerous decomposition products likely to be produced by combustion or contact with air or water.

4. PRECAUTIONS DURING STORAGE AND HANDLING

- Special storage conditions are specified, particularly as regards temperature, humidity and light.
- This section can also comprise special instructions which can apply to certain product categories. (e.g. aerosols).

5. ACTION TO BE TAKEN IN THE EVENT OF EXPOSURE TO THE RISKS HEALTH RISKS

- The measures to be taken are given according to type of exposure: contact with skin and eyes, inhalation, ingestion. If certain specific symptoms necessitate special medical treatment, this is mentioned. The need for medical assistance is assessed and specified where necessary. The measures recommended are in accordance with product danger; for example, measures such as immediate medical assistance are only mentioned if justified.

6. RISKS OF EXPLOSION AND IGNITION

- The appropriate methods of extinguishing are mentioned; the means and methods of extinguishing which are not recommended and the specific dangers are also listed.

7. RISKS IN CASE OF ACCIDENTAL DISPERSAL AND INDIVIDUAL PROTECTION

- The cleansing methods (e.g. collection or absorption) are mentioned. When individual protection (hands, face, etc.) and/or protective clothing are required, this is mentioned.

8. CONSIDERATIONS RELATING TO DISPOSAL / ECOLOGICAL INFORMATION

- The methods of preserving waste materials for storage and transport as well as a description of their treatment, are noted.

9. INFORMATION RELATING TO TRANSPORT

- Information concerning different methods of transport is mentioned.
- If some of this information varies in relation to the formula (e.g. UN number for the powders/bleaching pastes), reference to the labelling affixed on packing of transport is necessary to supplement this heading.
- Where the transport classification is in relation to certain physicochemical properties of the product (e.g. flash point, fire point), this information is indicated.

Generic Cover Page

For the Manufacturers who wish to use the model of generic cover page proposed, a guide of use is supplied below:

This document must be completed by the Quality Manager or by any other person responsible for releasing this information outside the Company.

Title: the category of the product in question, as indicated in the heading of the corresponding data sheet, must be added (e.g. ALKALINE HAIR RELAXERS).

1. MANUFACTURER'S DETAILS

- **Company:** name of the Trading Mark involved. The manufacturer's name may also be indicated.
- **Address:** the address must be that of the plant manufacturing the product in question.
- **Emergency telephone number:** the emergency telephone number.
- **Emergency fax:** if available.

2. IDENTIFICATION

- **Product's commercial name:** the product's commercial name must be given as it appears on the product packaging. The product code may also be added.
- **Product's reference:** according to the company.

This document must be approved and dated by the Quality Manager or by any other person responsible for releasing this information outside the Company.
